Approved For Release 2001/11/01 : CIA-RDP76-00409R000100050013-5

EXPLANATION OF OPTIONS

1. Option I involves the construction of a projection room in a portion of the north half of the existing Employee Waiting Room and the installation of a 5 foot wide rear projection screen in the south wall of the DCI Conference Room. This screen size would allow only single-image projection rather than simultaneous projection of two images. The projection screen would be off-center on the wall in the Conference Room. The existing Security Assistant's office would remain unchanged.

2. Option II will provide a 5 foot wide rear projection screen centered in the south wall of the Conference Room. As in Option I, this installation would allow only single-image projection rather than simultaneous projection of two images. A modified Security Assistant's office with a glass partition would occupy the remainder of the existing space and no separate employee waiting space would be provided.

3. Option III provides a 10 foot wide rear projection screen capable of displaying simultaneous projection of two images. The screen when not in use would be concealed behind a vertically sliding chart or map display panel. The remainder of the existing space would contain a glass walled office as in Option II.
